

TextBlob Installation

Follow the steps to install TextBlob

```
$ pip install -U textblob
```

```
$ python -m textblob.download_corpora
```

This will install TextBlob and download the necessary NLTK corpora. If you need to change the default download directory set the `NLTK_DATA` environment variable.

Downloading the minimum corpora

If you only intend to use TextBlob's default models (no model overrides), you can pass the `lite` argument. This downloads only those corpora needed for basic functionality.

```
$ python -m textblob.download_corpora lite
```
